Appendix J - Platform Security	27
Appendix K - Identification and Access Management	30
Appendix L - Applications.....	31
Appendix M - Security Methodologies.....	32
Appendix N - Security Vulnerabilities and Prevention Techniques	34

1. Introduction

The technical syllabus identifies at a high level the technical skills and knowledge that CREST expects candidates to possess for the Certification examinations in the area of Intrusion Analysis. There are specialist exams for each subject area and core skills exams which cover all 3 areas:

1.1. CREST Certified Network Intrusion Analyst (CCNIA)

The (CCNIA) examination tests candidates' knowledge and expertise in analysing data sources for evidence relating to potential network compromise..

1.2. CREST Certified Host Intrusion Analyst (CCHIA)

The (CCHIA) examination tests candidates' knowledge of analysing Windows hosts for evidence of potential compromise.

1.3. CREST Certified Malware Reverse Engineer (CCMRE)

The (CCMRE) examination tests candidates' ability to reverse engineer malware, particularly remote access Trojans.

1.4. CREST Practitioner Intrusion Analyst (CPIA)

The (CPIA) examination tests a candidates' knowledge across all 3 subject areas at a basic level below that of the CREST Registered examination.

1.5. CREST Registered Intrusion Analyst (CRIA)

The (CRIA) examination tests a candidates' knowledge across all 3 subject areas at an intermediate level. The CREST Registered Intrusion Analyst examination has one component: a multiple choice practical question section. All candidates must hold a valid CPIA certification to be eligible to sit this examination.

1.6. CREST Certified Incident Manager (CCIM)

The (CCIM) examination tests a candidates' knowledge across a wider range of areas including traditional incident response technical tasks and also a wide range of general technology areas to ensure they are competent to assess and handle a wide range of potential incident scenarios. The level of detail in these areas is high level but broad with "an awareness of" being a good description of the level of detail required. The specific Appendix G section for this exam focusses in detail on core response manager skills and the level of detail required here is greater as this is assumed to be the core domain of knowledge for an incident manager.

All Intrusion Analyst Certification examinations also cover a common set of core skills and knowledge; success at any of these Examinations will confer the relevant CREST Practitioner/Registered/Certified status to the individual.

2. Certification Examination Structure

The technical Certification Examinations have at most two components: a written paper and a practical assessment.

In the Certified level exams, the written paper consists of two sections: a set of multiple choice questions and a selection of long form questions that will require longer written answers. The Practitioner level exam consists of a multiple choice written section only and the Registered level exam does not contain a written section.

The practical assessment tests candidates' abilities to analyse data provided to the candidate.

The incident manager exam does not have a practical test element but has a mix of multiple choice, long form and detailed scenario type questions.

The relevant Notes for Candidates document for the Certification Examinations provides further information regarding the Certification Examinations in general and the skill areas that will be assessed within the practical components.

3. Syllabus Structure

The syllabus is divided into ten knowledge groups (Appendices A to J below), each of which is subdivided into specific skill areas.

For each skill area, CREST has indicated where and how the area will be assessed: in which Certification Examination (Network Intrusion Analysis, Host Intrusion Analysis or Malware Reverse Engineering) and in which component (Written Multiple Choice, Written Long Form, or Practical).

Within the tables, the following acronyms apply:

CCNIA	CREST Certified Network Intrusion Analysis
CCHIA	CREST Certified Host Intrusion Analysis
CCMRE	CREST Certified Malware Reverse Engineer
CPIA	CREST Practitioner Intrusion Analyst
CRIA	CREST Registered Intrusion Analyst
CCIM	CREST Certified Incident Manager
MC	Written Multiple Choice
SF	Written Short Form
LF	Written Long Form
P	Practical

Appendix A - Soft Skills and Incident Handling

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
A1	Engagement Lifecycle Management	<p>Benefits and utility of incident response to the client.</p> <p>Awareness of steps that can be taken to prepare for potential incidents.</p> <p>Structure of incident response engagements, including the relevant processes and procedures.</p> <p>Knowledge of appropriate actions that should be taken when investigating an incident. Understanding that some actions should be avoided due to risk of evidence corruption.</p> <p>Know how to safely handle malware and potentially malicious files encountered during an engagement.</p> <p>Understanding limitations of system logs.</p>	MC	MC	MC	MC		MC SF LF
A2	Incident Chronology	<p>Use of timelines to analyse event data</p> <p>Time zone issues</p> <p>System interpretation of timestamps with images</p>	MC P	MC P	MC	MC	P	MC SF LF
A3	Law & Compliance	<p>Knowledge of pertinent UK legal issues:</p> <p>Computer Misuse Act 1990</p> <p>Human Rights Act 1998</p> <p>Data Protection Act 2018 and General Data Protection Regulation (GDPR)</p> <p>Police and Justice Act 2006</p> <p>Regulation of Investigatory Powers Act 2000</p>	MC	MC	MC	MC		MC SF

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
A3	Law & Compliance	<p>Criminal Justice Act 2008</p> <p>Protection of Children Act 1978</p> <p>Sexual Offences Act 2008</p> <p>Digital Millennium Copyright Act and consequences for reverse engineering.</p> <p>Knowledge of evidential integrity and chain of custody.</p> <p>Awareness of sector-specific regulatory issues (e.g. FSA, PCI). Understanding of situations that require notification of third-parties.</p> <p>Understanding of when and how to engage law enforcement</p> <p>Knowledge of CERTS and their role and jurisdiction</p>	MC	MC	MC	MC		MC SF
A4	Record Keeping, Interim Reporting & Final Results	<p>Understanding reporting requirements.</p> <p>Understanding the importance of accurate and structured record keeping during the engagement.</p>	P	P	P		P	SF LF
A5	Threat Assessment	<p>Understanding how a threat translates to the client and the business context of a given incident.</p> <p>High level methodologies surrounding threat assessment.</p> <p>Attribution of attacks.</p> <p>Knowledge of attacker motivation.</p> <p>Identifying key individuals likely to be selected for targeted attack.</p>	MC	MC	MC	MC		MC SF LF

Appendix B - Core Technical Skills

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
B1	IP Protocols	<p>IP protocols: IPv4 and IPv6, TCP, UDP and ICMP.</p> <p>Detailed knowledge of application layer protocols commonly used by Trojan malware, namely TCP, UDP, HTTP[S], SMTP, and DNS.</p> <p>In-depth understanding of how the Internet (web browser/server architecture) and email systems function.</p> <p>Fundamental knowledge of at least the following protocols; IRC, DHCP, FTP, SMB, SNMP, ICMP.</p>	MC	MC	MC	MC	P	MC
B2	Network Architectures	<p>Varying networks types that could be encountered during analysis:</p> <p>CAT 5/6</p> <p>Basic understanding of common fibre technologies</p> <p>Windows Domain architectures</p> <p>Network Address Translation</p> <p>10/100/1000baseT</p> <p>Wireless (802.11)</p> <p>Security implications of shared media, switched media and VLANs.</p> <p>IP Subnets</p> <p>IP Routing</p>	MC	MC	MC	MC		MC SF LF
B3	Common Classes of Tools	<p>Knowledge of common classes of tools used to perform intrusion analysis and reverse engineering. Basic understanding of the capabilities of common tools.</p>	MC	MC	MC	MC	P	MC
B4	OS Fingerprinting	<p>Passive operating system fingerprinting techniques.</p>	MC P	MC		MC		MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
B5	Application Fingerprinting	<p>Determining server types and network application versions from evidential data.</p> <p>Identification of client software versions from meta-data contained within common document types.</p> <p>Identification of client/server software versions from service banners, user-agent strings, email headers etc.</p>	MC P	MC P		MC	P	MC
B6	Network Access Control Analysis	<p>Reviewing firewall rule bases and network access control lists.</p>	MC P	MC P		MC	P	MC SF LF
B7	Cryptography	<p>Differences between encryption and encoding.</p> <p>Symmetric / asymmetric encryption</p> <p>Encryption algorithms: DES, 3DES, AES, RSA, RC4.</p> <p>Hashes: SHA family and MD5</p> <p>Message Integrity codes: HMAC</p>	MC	MC	MC	MC		MC SF LF
B8	Applications of Cryptography	<p>SSL, IPsec, SSH, PGP</p> <p>Common wireless (802.11) encryption protocols: WEP, WPA, TKIP</p>	MC	MC	MC	MC		MC SF LF
B9	File System Permissions	<p>File permission attributes within Windows file systems and their security implications.</p> <p>Analysing registry ACLs.</p>	MC	P MC	MC	MC		MC
B10	Host Analysis Techniques	<p>Listing processes and their associated network sockets (if any).</p> <p>Assessing patch levels on a Windows host using the command prompt.</p> <p>Finding interesting files on a Windows host.</p>	MC	MC P	MC	MC	P	MC
B11	Understanding Common Data Formats	<p>Candidates are expected to be able to interpret email headers, commenting on the reliability of the information contained within.</p> <p>Understanding of the information contained within a PKI certificate</p> <p>Understanding of various encoding employed for transmission of data (e.g. web and email)</p>	MC	MC	MC	MC		MC

Appendix C - Background Information Gathering and Open Source

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
C1	Registration Records	Information contained within IP and domain registries (WHOIS).	MC	MC	MC	MC		MC
C2	Domain Name Server (DNS)	<p>DNS queries and responses</p> <p>DNS zone transfers</p> <p>Structure, interpretation and analysis of DNS records:</p> <ul style="list-style-type: none"> • SOA • MX • TXT • A • NS • PTR • HINFO • CNAME <p>Awareness of dynamic DNS providers, how they function and security implications. Understand the concept of fast-flux DNS.</p>	MC P	MC	MC	MC		MC
C3	Open Source Investigation and Web Enumeration	<p>Effective use of search engines and other open source intelligence sources to gain information about a target.</p> <p>Knowledge of information that can be retrieved from common social networking sites</p>	MC	MC	MC	MC		MC
C4	Extraction of Document Meta Data	Be able to extract meta-data such as author, application versions, machine names, print and operating system information from common document formats.	MC P	MC		MC		MC
C5	Community Knowledge	<p>Ability to interpret common anti-virus threat reports</p> <p>Ability to interpret open-source research when investigating incidents, eliminating false positives.</p> <p>Knowledge of popular open-source security resources (web sites, forums, etc.).</p>	MC	MC	MC	MC		MC SF LF

Appendix D - Network Intrusion Analysis

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
D1	Network Traffic Capture	<p>Methods of data collection and types of data to be collected.</p> <p>Designing a collection system to ensure sufficient data is collected without overwhelming capture devices.</p> <p>Impact assessment of any changes to network.</p> <p>Knowledge of SPAN ports, traditional network TAPs and aggregating TAPs.</p> <p>Ability to estimate capture requirements during scoping.</p> <p>Consideration of appropriate capture device deployment location.</p> <p>Constraints and limitations of capture and analysis toolsets. Knowledge of different capture options (e.g. NetFlow, limited capture, full packet capture etc.)</p> <p>The ability to assure integrity and security of network after introduction of a capture device</p> <p>Provide arguments and evidence that supports the integrity of any data captured.</p>	MC		MC	MC		MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
D2	Data Sources and Network Log Sources	<p>Types of data to be collected and existing data sources which should be considered to provide a complete picture of activity.</p> <p>Candidates should be familiar with the type of information provided in at least the following:</p> <ul style="list-style-type: none"> • Proxy logs • syslogs • Email logs • Firewall logs • DHCP logs • VPN logs • Web server logs • Antivirus logs • DNS logs • Domain logs • Windows event logs • Internet history • Database logs <p>Correlation of information contained within any number of different log formats.</p>	MC P	MC P		MC	P	MC SF LF
D3	Network configuration security issues	<p>Observation/detection of common network misconfiguration issues such as:</p> <ul style="list-style-type: none"> • IP Routing issues • DNS information leakage • Unexpected traffic routes • Email routing issues • Firewalls/rules not working <p>Detection of deliberate attempts to bypass firewall/proxy rules.</p>	MC P			MC		MC SF LF
D4	Unusual Protocol Behaviour	<p>Observation/detection of common protocols exhibiting non-standard behaviour.</p> <p>Verification of various protocols regardless of TCP/UDP port in use.</p> <p>Identification of illegal protocol usage for purposes of vulnerability exploitation or cache poisoning etc.</p>	MC P			MC		MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
D5	Beaconing	Ability to recognise and detect both covert and open malware beacons from statistical analysis, signatures, and manual review of traffic and logs. Traffic may include a variety of IP protocols.	MC P	MC			P	MC SF LF
D6	Encryption	Understanding of channel fingerprinting. Analysis of traffic flows (volume, directions, QoS, timing, custom or standard encryption). Identification of weak obfuscation using XOR, ROL or codebooks and approaches to deobfuscation.	MC P	P		MC		MC
D7	Command and Control Channels	Ability to recognise and detect both covert and open C&C from statistical analysis, signatures, and manual review of traffic and logs. Traffic may include a variety of IP protocols.	MC P	P		MC	P	MC SF LF
D8	Exfiltration of Data	Ability to recognise and detect both covert and open exfiltration of data from statistical analysis, signatures, and manual review of traffic and logs. Traffic may include a variety of IP protocols.	MC P	MC P		MC	P	MC SF LF
D9	Incoming attacks	Detect successful incoming attacks against public facing services, including email, from statistical analysis, signatures, and manual review of traffic and logs. Traffic may include a variety of IP protocols.	MC P			MC	P	MC
D10	Reconnaissance	Detect internal and external reconnaissance activities from statistical analysis, signatures, and manual review of traffic and logs. Traffic may include a variety of IP protocols.	MC P			MC	P	MC
D11	Internal spread and privilege escalation	Detect the spread of malware within a network and indicators of privilege escalation from statistical analysis and manual review of traffic that may include a variety of different IP protocols and logs.	MC P			MC	P	MC SF LF

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
D12	Web based attacks	<p>Ability to identify potentially malicious elements within HTML and other common web file types</p> <p>Ability to decode obfuscated JavaScript code and determine whether or not the code is malicious in nature.</p>	MC P	MC P				MC SF LF
D13	False Positive Acknowledgement	<p>Determine whether or not a given IDS alert is a true hit or false positive.</p> <p>Suggest improvements to common IDS signatures to reduce false positive rates.</p>	MC P			MC	P	MC

Appendix E - Analysing Host Intrusions

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
E1	Host-based Data Acquisition	Fundamental acquisition concepts, techniques and methodologies, including static and dynamic evidence gathering and image formats. Local and remote acquisition scenarios.		MC		MC		MC
E2	Live Analysis Laboratory Set-up	Basic infrastructure configurations Host hardening and sandbox environments Booting an image Issues relating to dynamic analysis of executables		MC	MC	MC		MC
E3	Windows File System Essentials	Disk partitioning FAT – File Allocation Table, directory entries NTFS – \$MFT, \$Bitmap ACLs & SIDs Unallocated space File carving EFS & BitLocker		MC P	MC	MC	P	MC
E4	Windows File Structures	Prefetch Volume Shadow Copy System Restore Points User profiles Temporary files Network configuration (hosts file) Pagefile & hibernation file Shimcache Registry hives Recycle bin Event logs (Binary XML e.g. evtx) NTDS (Active Directory) WMI (OBJECTS.DATA)		MC P	MC	MC	P	MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
E5	Application File Structures	Archive formats (Zip, RAR, etc) Browser artefacts PE files Office documents (OLE and Office Open XML), including knowledge of DDE and Macro exploits PDF Email file structures (Exchange, PST) AV artefacts (quarantines and logs) Thick-client files (Java, Flash, .NET) Log files	MC	MC P	MC	MC	P	MC
E6	Windows Registry Essentials	Registry structures (hive format) USB/removable storage artefacts Autorun/startup locations ACLs Protected storage Shimcache User accounts		MC P	MC	MC	P	MC
E7	Identifying Suspect Files	Use of hash tables to find common malware Strings File permissions Packed executables Fuzzy hashing Signature analysis	MC P	MC P	P	MC	P	MC
E8	Storage Media	Hard Disks – Interface types (PATA/SATA, SCSI, SAS), HPA, DCO, Password protection Solid State Devices – Hard Disks, Pen Drives, Media Cards, wear levelling issues, how this media type varies from magnetic Full Disk Encryption RAID – levels of RAID type and error correction NAS	MC	MC		MC		MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
E9	Memory Analysis	<p>Analysis – running processes, parent/child process identification, DLLs, sockets</p> <p>Process acquisition</p> <p>Clipboard contents</p> <p>Correlating memory artefacts with on-disk applications</p> <p>Network connections</p> <p>Command prompt history</p> <p>Browser history</p> <p>Use of common memory analysis frameworks (e.g. Volatility)</p>		MC P	MC	MC	P	MC
E10	Infection Vectors	<p>Infected Executables/DLL, Documents (Macros, DDE), JavaScript</p> <p>Drive-by downloads</p> <p>USB/external media/shared drive vectors</p> <p>Passive exploitation</p> <p>Email-based attacks</p>	MC P	MC P	MC	MC	P	MC
E11	Malware Behaviours and Anti-Forensics	<p>Encryption</p> <p>Steganography</p> <p>Password Protection</p> <p>Obfuscation</p> <p>Covert storage techniques</p> <p>Covert communication techniques (command and control, recon, and exfiltration)</p> <p>Data Erasure Applications</p> <p>Filing System – NTFS ADS</p>		MC P	MC	MC		MC
E12	Rootkit Identification	<p>How to identify rootkits</p> <p>Hooking techniques</p>		MC P	MC	MC		MC
E13	Live Malware Analysis	<p>Identification of open files/registry keys/network sockets</p> <p>Process monitoring tools</p>		MC P	MC	MC	P	MC
E14	Linux OS File Structures	<p>utmp</p> <p>btmp</p> <p>wtmp</p>		MC P				

Appendix F - Reverse Engineering Malware

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
F1	Windows Anti-Reverse Engineering	<p>Common techniques to prevent debugging or virtualisation of the malware code and ways of circumventing them.</p> <p>Known anti-reverse engineering techniques including high profile bugs in common debuggers and disassemblers.</p>			P MC	MC		MC
F2	Functionality Identification	<p>Identifying common cryptographic algorithms in binaries through, for example, use of standard constants and common instructions.</p> <p>Identifying network send/receive loops</p> <p>Infection vectors and persistence mechanisms</p>			P	MC	P	MC
F3	Windows NT Architecture	<p>Core architecture of NT kernel and user mode, including process model and security mechanisms (Windows XP and newer)</p> <p>NT Native APIs, Driver interfaces</p> <p>Differences between 64 bit and 32 bit platforms</p>		MC	MC	MC		MC
F4	Windows API Development	Common API calls, e.g. file, network.			MC	MC		MC
F5	Binary code structure	<p>Function calling conventions</p> <p>Compiler generated constructs, e.g. binary implementation of C++ objects (Virtual Function Table etc.)</p>			MC	MC		MC
F6	Cryptographic Techniques	<p>Encryption Key material identification and extraction</p> <p>Identifying implementation weaknesses</p>			P	MC		MC
F7	Processor Architectures	<p>Intel x86/x64 instruction set</p> <p>Virtual Memory Implementation</p> <p>Virtualisation Technology</p>			MC	MC	P	MC

ID	Skill	Details	How Examined					
			CC NIA	CC HIA	CC MRE	CP IA	CR IA	CC IM
F8	Windows Executable File Formats	Standard windows executable formats (e.g. PE, EXE, COM) Extracting important information in executable files		MC	MC P	MC	P	MC
F9	Hiding Techniques	Common techniques for process injection Rootkit techniques for hiding files and other system resources including: <ul style="list-style-type: none"> SSDT patching Filter drivers Process list manipulation 			MC P	MC		MC
F10	Malware Reporting	Signature identification Cleanup of malware Infection vectors Footprint	MC	MC	MC	MC		MC
F11	Binary Obfuscation	Packers and Executable Encryption Techniques to restore packed executables Rebuilding executable content from memory Virtual machine instruction sets (e.g. PCode)	MC	MC	MC P	MC		MC
F12	Behavioural Analysis	Use of common tools to identify patterns of behaviour Aspects of command and control Infection vectors and persistence mechanisms	MC	MC	MC P	MC	P	MC

Appendix G - Incident Management

ID	Skill	Details	How Examined
			CCIM only
G1	Client management	Client and project management, including effective management of the people involved during volatile and highly charged situations.	MC SF LF
G2	Containment techniques	Containment techniques with short and medium-term actions that are properly considered and risk-assessed for each environment. This requires an awareness of business continuity arrangements and requirements for the wider business.	MC SF LF
G3	Project management and time management	Project management and time management are essential investigative and management skills for managing staff, costs and deliverables to meet client requirements. Contracts, NDAs, scope and authorisation all need careful proactive management during an engagement	MC SF LF
G4	Evidence handling	Evidence handling and control and management of the evidential chain require a qualified person to take control of the situation, keep the appropriate logs and take the necessary actions to preserve evidential integrity.	MC SF LF
G5	Communications	Communications both to the client and also to third parties needs to be carefully managed and scripted to avoid misinformation spreading and messages being poorly understood. This involves working with PR and branding teams to ensure all media contact is appropriately managed. This may require use of an existing crisis management plan.	MC SF LF
G6	Recovery and remediation	Recovery and remediation options are necessarily very client and project specific. Appropriate guidance is needed based on multiple requirements such as time, cost and on-going threat.	MC SF LF
G7	On-going technical prevention	Once an environment has been cleared of malware it essential to ensure that measures are in place for on-going technical prevention. These may be changes to business practices, user environments or architectural changes to security at a wider organisational level.	MC SF LF

ID	Skill	Details	How Examined
			CCIM only
G8	Judgement making and critical reasoning	When working in volatile situations it is essential that the on-going drip feed of information is used to update the understanding of the situation in near real time. This requires critical reasoning and judgement making skills and the willingness to completely change a position as new information comes to light.	MC SF LF
G9	Written skills	Written comprehension is a key part of taking information from the numerous reports and data sources available.	MC SF LF
G10	Third Parties	Dealing with external third parties in a knowledgeable way is becoming an ever more important part of incident response as more services are being offloaded to SaaS, IaaS and other cloud offerings.	MC SF LF
G11	Reporting Agencies	Dealing with external reporting bodies often falls within the remit of an incident manager, even if this is only a case of explaining to a client who needs to be contacted. Awareness of relevant CERTs, government agencies and public bodies (eg FSA) is essential.	MC SF LF
G12	Threat intelligence, Contextualisation Attribution and Motivation.	Keeping up to date with threat intelligence and situational awareness is essential. This can include open source information, company specific research and also classified sources. Identifying likely actors and their motivation.	MC SF LF
G13	Industry Best Practice	Awareness of industry best practice and open/industry standards (SANS, ENISA, NIST and ISO standards) GPG13 and Forensic readiness planning (SPF)	MC SF LF
G14	Risk Analysis	Business Impact Assessments Awareness of the relevance and importance of Risk Assessments and Business Impact Assessments to the role of an incident manager in providing appropriate guidance to a client organisation.	MC SF LF
G15	Attack & compromise lifecycle.	Attack / compromise lifecycles (kill chain). Anatomy of an attack and the key components and stages of an incident. Compromise, Disruption, Extraction of data, etc.	MC SF LF
G16	Legal and Jurisdictional Issues	Complexities of remote and international working, including legal and jurisdictional issues and also the added complexity of remote capture over variable quality WAN links.	MC SF LF

ID	Skill	Details	How Examined
			CCIM only
G17	Ethics	An awareness of the strong ethical requirements needed when working in incident response. This includes a detailed understanding of the CREST Code of Conduct and the responsibilities it places on individuals and companies.	MC SF LF
G18	Technical vulnerability root cause identification	Technical vulnerability root cause identification requires seeing further than the technical issues and identifying business level strategic failures that allowed a problem to occur in the first place. Missing patches may be accidental or endemic and may reoccur if the root cause is not identified and treated.	MC SF LF
G19	Physical threats	An awareness of potential physical threats that provide may provide network access is required. Many attacks may be a blend of logical and physical attacks, such as those originating from public access locations or wireless networks.	MC SF LF
G20	Insider attacks	An awareness of potential insider attacks and attacks that start with exploiting human targets. This includes lost hardware such as media sticks, laptops, phones and other portable devices.	MC SF LF

Appendix H - Computer Networking Fundamentals

ID	Area	Details	How is it Examined
			CCIM only
H1	Wireless Networking	<p>Understanding the existence and use of varying networks types that could be encountered during an architecture project:</p> <ul style="list-style-type: none"> • Wireless (802.11a) • Wireless (802.11b/g/n) • WiMax • Microwave Point to Point • Optical Point to Point • 2G/3G/4G (GSM, GPRS, HSDPA) • TETRA 	MC
H2	Virtual Private Networks	<p>Understanding the existence and use of varying VPN types that could be encountered during an architecture project:</p> <ul style="list-style-type: none"> • Point to Point • Roaming remote user • Virtual Circuits / Tagging • IPSEC • PPTP • L2TP • SSL/TLS • SSTP • DMVPN • MPLS 	MC
H3	ICMP	<p>Understanding the existence and uses of ICMP messages and how the various message types can be useful in designing and debugging a network architecture.</p>	MC
H4	IPV6	<p>Understanding the existence and benefits of IPv6 , together with potential exposures as a result of using this protocol and issues around interoperability with existing legacy systems.</p>	MC

ID	Area	Details	How is it Examined
			CCIM only
H5	DNS	<p>Understanding the existence and use of DNS protocol and services both within the public Internet and also within corporate networks. This will specifically include the role of DNS within Microsoft Active Directory.</p> <ul style="list-style-type: none"> • DNS queries and responses • DNS zone transfers • Public DNS Hierarchy & Authorities • DNS Security Options & Risks • Reverse DNS <p>Structure and interpretation of key types of DNS record entries:</p> <ul style="list-style-type: none"> • MX • A • NS • PTR • CNAME 	MC
H6	NTP	<p>Understanding the existence and use of NTP protocol and services both within the public Internet and also within corporate networks. This will specifically include the importance of NTP within logging and monitoring solutions.</p> <ul style="list-style-type: none"> • Time sources • Authoritative sources • Time synchronisation 	MC
H7	Bluetooth	<p>Understanding the existence and use of the Bluetooth protocol and services and their implications for the security of the wider corporate network architecture.</p> <ul style="list-style-type: none"> • Potential Attack Vectors • Range Limits • File Transfer • Personal Area Data Networking 	MC
A8	IPV4	<p>IPv4 network fundamentals including understanding of</p> <ul style="list-style-type: none"> • IP addresses • Subnet Masks • Public / Private IP Space • ARP protocols • Network Address Translation • Fragmentation • Quality of Service • CIDR 	MC
H9	TCP/UDP	<p>TCP/UDP network fundamentals including the implications of</p> <ul style="list-style-type: none"> • Connection orientated links • Connectionless links • Resilience / Packet Loss • Applications of TCP versus UDP 	MC

ID	Area	Details	How is it Examined
			CCIM only
H10	Routing Protocols	<p>Routing fundamentals including an understanding of</p> <ul style="list-style-type: none"> • CIDR • RIP • OSPF • EIGRP • Static Routing • Failover • HSRP • BGP 	MC
H11	Data Link Layer	<p>Layer 2 network fundamentals including an understanding of</p> <ul style="list-style-type: none"> • Ethernet • VLANS • DSL • ISDN • PPP • ARP <p>To include effects of packet size limits, latency, broadcast domains and the types of segregation available within these protocols.</p>	MC
H12	Physical Layer Networks	<p>Layer 1 physical network fundamentals including an understanding of</p> <ul style="list-style-type: none"> • Copper Ethernet • Fibre Optic Ethernet • Satellite Links • Radio Links • ATM • SDH • MTU <p>To include effects of packet size limits, latency, broadcast domains and the types of segregation available within these protocols.</p>	MC
H13	SNMP	<p>Understanding the existence and use of SNMP protocols for systems monitoring, particularly within corporate networks. This will specifically include the importance of SNMP within logging and monitoring solutions.</p> <ul style="list-style-type: none"> • Community Strings / Authentication • Encryption • SNMP Versions 	MC
H14	Syslog	<p>Understanding the existence and use of Syslog protocol for systems monitoring, particularly within corporate networks. This will specifically include the importance of Syslog within logging and monitoring solutions and inherent weaknesses within the protocol.</p>	MC

Appendix I - Virtualisation Technologies

ID	Area	Details	How is it Examined
			CCIM only
I1	Hardware Virtualisation	Understanding the existence and use of hypervisor solutions to provide platform virtual machine solutions and the security implications (notably management issues and lack of physical segregation) of these technologies. Example – VMWare ESXi (VSphere)	MC
I2	Ethernet based Virtual LANs (VLANs)	Understanding the appropriate configuration and uses of VLAN technologies in system architecture design and the security implications (notably management issues and lack of physical segregation) of these technologies.	MC
I3	Virtualised Firewalls	Understanding the appropriate configuration and uses of virtualised firewall solutions and the security implications (notably management issues and lack of physical segregation) of these technologies. Example – Juniper Netscreen VSYS	MC
I4	Virtualised Operating Systems	Understanding the appropriate configuration and uses of virtualised operating systems and the security implications (notably management issues and lack of physical segregation) of these technologies. Example – Solaris Containers	MC
I5	Virtualised Databases	Understanding the appropriate configuration and uses of virtualised database systems and the security implications (notably management issues and lack of physical segregation) of these technologies. This will include the difference between database instances and virtual databases. Example - Oracle (11g) Virtual Private Database	MC
I6	Cloud Technologies	Understanding the implications of Cloud solutions including Software as a Service (SaaS), Cloud hosting and Cloud Storage. Note this section refers to the specific concerns around the use of shared clouds as the virtualisation technologies employed are dealt with earlier in this section.	MC

Appendix J - Platform Security

ID	Area	Details	How is it Examined
			CCIM only
J1	Operating Systems	<p>Awareness of common server and desktop operating systems and their fundamental security characteristics. To include</p> <ul style="list-style-type: none"> • Microsoft Windows (all) • Sun Solaris • HP UX • AIX • Linux (all) & BSD (all) • Mac OS X 	MC
J2	Hardware Thin Client systems	<p>Awareness of common thin client hardware platforms, their base operating systems and their fundamental security characteristics. To include</p> <ul style="list-style-type: none"> • Wyse ThinOS • Windows XP Embedded 	MC
J3	Mobile Devices	<p>Awareness of common mobile hardware platforms, their base operating systems and their fundamental security characteristics. To include</p> <ul style="list-style-type: none"> • Apple IOS (iPhone, iPad) • Android (tablets and phones) • Windows Mobile • Blackberry 	MC
J4	Desktops	<p>Awareness of common desktop platforms, their base operating systems and their fundamental security characteristics. To include</p> <ul style="list-style-type: none"> • Laptops • Netbooks • Desktops • Windows (all) • Linux & BSD • Apple (all) • Lockdown policies (including GAP) 	MC
J5	Embedded Systems	<p>Awareness of common embedded systems and their fundamental security strengths and weaknesses</p> <ul style="list-style-type: none"> • NAS Devices • IP Cameras / CCTV • NTP time sources • Logging & Monitoring solutions • Network Diagnostic equipment • Building Management Systems • HVAC Systems • Physical Security/Alarm Systems 	MC

ID	Area	Details	How is it Examined
			CCIM only
J6	SAN and NAS systems	<p>Awareness of common SAN and NAS technologies and their fundamental security strengths and weaknesses (including management issues)</p> <ul style="list-style-type: none"> • Fibre Channel • iSCSI • LUNs • Partitioning / Separation • NFS • SMBFS/CIFS 	MC
J7	Multi-Function Devices	<p>Awareness of common network enabled Multi-Function Devices and their fundamental security strengths and weaknesses.</p> <p>Example - Combination printer/scanner/copier/fax devices offer rich variety of functionality to users but are often not configured appropriately for use in secure environments.</p>	MC
J8	Trusted Computing	<p>Awareness of Trusted Platform Module concepts and common hardware and software components and their implementations. Specifically how the TPM can be used to increase platform integrity and to provide more secure disk encryption and password protection solutions.</p>	MC
J9	Resilience	<p>Awareness of the need for and requirements of typical resilience solutions. Including resilience concepts such as hot standby, dual routing and implementations such as RAID, clustering (including databases), fault tolerant clouds, HSRP and VRRP.</p>	MC
J10	Databases	<p>Awareness of common databases and their fundamental security strengths, weaknesses and architectural features.</p> <ul style="list-style-type: none"> • Microsoft SQL • Oracle • MySQL 	MC
J11	Desktop Virtualisation	<p>Awareness of common thin client technologies and the implications they have for security when connected to a corporate network.</p> <ul style="list-style-type: none"> • Microsoft Terminal Services • Citrix (CAG etc) • VMWare View (VDI) • VNC 	MC

ID	Area	Details	How is it Examined
			CCIM only
J12	Personal devices	<p>Awareness of the security implications of devices not owned and managed by a corporate entity being connected to a corporate network or used to process its data.</p> <ul style="list-style-type: none"> • Laptops • Mobile Phones • PDAs • Tablets • Home Computers 	MC
J13	Platform and Application Logging	<p>Understanding the existence and use of Operating System and Application level logging and auditing functions. This includes the Windows Event sub-system for monitoring, particularly within corporate networks. This will specifically include the importance of data level logging of event such as</p> <ul style="list-style-type: none"> • File Access audit logs • Database Access audit logs • Web Server Logs • Middleware Application Logs 	MC

Appendix K - Identification and Access Management

ID	Skill	Details	How Examined
			CCIM only
K1	Directories and Identity Management	<p>Awareness of the common directory technologies used in large scale network architectures.</p> <ul style="list-style-type: none"> • Microsoft Active Directory • LDAP • Microsoft Federated Identity Manager • Novell Netware (Open Enterprise Server) • Lotus Notes <p>Understanding of the principles of identity and how these differ from access and authentication controls.</p>	MC
K2	Role Based Access Controls (RBAC)	An understanding of the design concepts required to implement an effective RBAC solution, notably Subject, Roles and Permissions.	MC
K3	Authentication	Awareness of the common single and multifactor authentication schemes available including passwords, tokens, certificates, single sign on and biometric solutions.	MC
K4	Smart Cards	Awareness of the uses and commercially available implementations of Smart Card authentication systems for use in enterprise class IT systems.	MC
K5	RFID & NFC	Awareness of the uses and commercially available implementations of RFID & NFC authentication systems for use in enterprise class IT systems. An awareness of the wider use of RFID technologies is also required.	MC
K6	Biometrics	Awareness of the uses and commercially available implementations of biometric authentication systems and their limitations in large scale practical solutions.	MC

Appendix L - Applications

ID	Skill	Details	How Examined
			CCIM only
L1	Thin client	An understanding of the concepts behind thin client applications and the implications they have for system design and the placement of security barriers such as firewalls.	MC
L2	Thick client	An understanding of the concepts behind thick client applications and the implications they have for system design and the placement of security barriers such as firewalls.	MC
L3	Web client	An understanding of the concepts behind web client applications and the implications they have for system design and the placement of security barriers such as firewalls.	MC
L4	Email/Messaging	An understanding of the concepts behind messaging systems such as email and the implications they have for system design and the placement of security barriers such as firewalls and content filters.	MC
L5	VOIP	An understanding of the concepts behind VOIP applications and the implications they have for system design and the placement of security barriers such as firewalls.	MC
L6	Mobile applications	An understanding of the concepts behind mobile applications and the implications they have for system design and the placement of security barriers such as firewalls due to their tendency to significantly increase the size of the security perimeter.	MC
L7	SCADA	An understanding of the concepts behind SCADA systems and the types of networks and technology often used to support them. An awareness of the key differences in approach to security compared to “standard” computer systems is also required.	MC

Appendix M - Security Methodologies

ID	Skill	Details	How Examined
			CCIM only
M1	Malware Protection	Awareness of the tools and products available to provide protection against attacks from malware and viruses.	MC
M2	Content Filtering	Awareness of the tools and products available to identify inappropriate and potentially malicious content in data transmissions such as email and web access.	MC
M3	DLP	Awareness of the tools and products available to enable Data Loss Prevention.	MC
M4	File Integrity Monitoring	Awareness of the tools and products available to identify unauthorised changes to files and file systems that may be the result of malware or hacker attacks.	MC
M5	SIEM	Awareness of the tools and products available that provide Security Information and Event Management capabilities for large corporate networks and systems.	MC
M6	Network Firewalls	Awareness of the common network firewall products that are available on the open market and an understanding of the capabilities they offer. Specifically, an understanding of the role of network firewalls and the threats they can and cannot protect against.	MC
M7	XML Firewalls	Awareness of the common XML firewall products that are available on the open market and an understanding of the capabilities they offer. Specifically, an understanding of the role of XML firewalls and the threats they can and cannot protect against.	MC
M8	Application Firewalls	Awareness of the common application firewall products that are available on the open market and an understanding of the capabilities they offer. Specifically, an understanding of the role of application firewalls and the threats they can and cannot protect against.	MC
M9	IDS/IPS	Awareness of the common IDS/IPS products that are available on the open market and an understanding of the capabilities they offer.	MC

ID	Skill	Details	How Examined
			CCIM only
M10	VPN Products	Awareness of the common VPN products that are available on the open market and an understanding of the capabilities they offer. Specifically the appropriateness of various products for use on government networks and their ability to be operated in line with relevant government standards.	MC
M11	Data Encryption	Awareness of the commonly available products used for encrypting data in transit and data at rest. Specifically the capabilities of the products in terms of the algorithms they offer and the types of authentication schemes they support.	MC
M12	Diodes	Awareness of the commonly available products used for ensuring information can flow only in one direction between computer systems.	MC
M13	DRM	Awareness of the commonly available products used for securing and controlling the distribution of proprietary information.	MC
M14	HSM	Awareness of the commonly available Hardware Security Module (HSM) products.	MC

Appendix N - Security Vulnerabilities and Prevention Techniques

ID	Skill	Details	How Examined
			CCIM only
N1	Content Injection	Awareness of the common types of cross site scripting attacks and how they can affect web applications. The differences in risk profile between internal and Internet facing applications should be understood.	MC
N2	SQL Injection	Awareness of the common types of SQL injection attacks and how they can affect both web applications and traditional applications. The differences in risk profile between internal and Internet facing applications should be understood.	MC
N3	Command Injection	Awareness of the common types of command injection attacks and how they can affect both web applications and traditional applications. The differences in risk profile between internal and Internet facing applications should be understood.	MC
N4	Buffer Overflows	Awareness of the common types of buffer overflow attacks and how they can affect applications.	MC
N5	Script Attacks	Awareness of the common types of script language attacks and how they can affect applications. The default Windows client-side scripting languages should be understood.	MC
N6	File System attacks	Awareness of the common types of file system mistakes and consequent attacks and how they can affect the security of systems.	MC
N7	User Escalation	Awareness of the common types of desktop weakness and consequent attacks and how they can affect the security of systems.	MC
N8	User Account Control	Awareness of key Microsoft technologies for securing modern operating systems and applications, including <ul style="list-style-type: none"> • User Account Control • Address Space Layout Randomisation • Data Execution Prevention 	MC
