Document Review

Reviewer	Position
Chair	Technical Committee / Assessors Panel
Chair	CREST Board

1 Introduction

1.1 Examination

There are two parallel tracks of the CREST Penetration Testing Certification (CCT) Examination:

- The Infrastructure Certification Examination, which assesses a candidate's capabilities in the field of general infrastructure and operating system security assessments.
- The Application Certification Examination, which assess a candidate's capabilities in the field of application security assessments.

Candidates can only sit one examination track at a time. Success at the Certification Examination will confer upon candidates the status of either:

- CREST Certified Tester (Infrastructure), or
- CREST Certified Tester (Application)

For both tracks, the CREST Certification qualification is valid for three (3) years.

1.2 Confidentiality

CREST takes the confidentiality of its examinations very seriously. The retention or dissemination of data relating to the examination (other than what is contained in the Notes for Candidates and Technical Syllabus documentation that is available from the CREST web site http://www.crest-approved.org/) is not permitted.

Along with their booking forms, candidates must also bring both a signed Non-Disclosure Agreement to this effect and also a signed Code of Conduct document, or be prepared to sign a both documents on the morning before they start the examination.

Both of these documents are provided by the CREST Administrator as part of the booking process. The Code of Conduct for Individuals is also available on the CREST website.

It should be noted that prior knowledge of specific CREST examination configurations will be of little use to candidates, as the Examination is constantly updated and revised and many of the answers are randomised tokens generated uniquely for each candidate.

2 Examination Details

The CREST Certified Tester (CCT) has two components: a written component and a practical component.

2.1 Written Component

2.1.1 Format

The written component of the CCTs examinations are delivered at a Pearson Vue centre of your choice. Please visit **www.pearsonvue.com** and follow the on-screen instructions to schedule your chosen examination:

Note the logistical requirements for exams conducted at a Pearson Vue centre are defined by Pearson Vue and candidates must ensure they adhere to all of the necessary requirements as listed on their web site. CREST candidates are not exempt from any of the standard requirements.

The written component of both tracks of the CREST CCT Certification Examination will comprise one hundred and fifty (150) multiple choice questions, all of which the candidate must complete.

2.1.2 Timings

The written examination will last 2.5 hours and you should attempt to answer all questions within this time.

Note that your permitted maximum session time at Pearson Vue is 3 hours in total, allowing you time to read the Code of Conduct and also to provide feedback following the examination.

2.1.3 Open Book / Closed Book

The entire written component of the exam will be conducted as a closed book exercise.

2.2 Practical Component

2.2.1 Format

The practical component of both tracks of the CREST Certified Tester Examinations will comprise a series of stages, split into structured tasks to be carried out against the CREST Certification Network and the target hosts, infrastructure and applications that it comprises. Please note that the practical components are not designed as replicas of “real world” security assessment engagements; rather, they are examinations whose aim is to test the skills and knowledge that security consultants and penetration testers will need to carry out effective security assessment engagements.

As noted above, stages and tasks are designed to examine fundamental infrastructure or web application penetration testing skills; candidates will be required to complete all of them. Success at each question or task is based on an item or items of information that the candidate must retrieve, acquire or derive from the target applications or infrastructure. The practical components have, wherever possible, been designed so that success at each question or task should *generally* not depend on success at other questions or tasks, however in some cases where system compromise is required before access can be gained, limited “task chaining” will occur.

The CCT level exams also include one scenario question where a candidate is expected to identify security related problems on a specific set of infrastructure/application and then document the findings.

2.2.2 Timings

The practical component will last 4½ hours. However, candidates will be given the practical component worksheet fifteen (15) minutes before the start, to allow its perusal before the examination starts.

Candidates should take great care to note that the breakdown of marks approximates to one mark per minute throughout each phase of the exam. If a candidate spends significantly more time than suggested by the marks for any one section or question then they are potentially missing out on marks that could have been obtained more quickly later in the paper. Where candidates are struggling with a particular question or section they are strongly advised to move on and return later in the session if remaining time permits.

2.2.3 Open Book / Closed Book

The practical component is an open book test with candidates permitted to use reference material they have brought along. Although the CREST certification network is not connected to the Internet, a dedicated Internet PC will be made available if required.

2.2.4 Integrity Protection

Candidates will not be permitted to connect their test platforms to CREST's Internet connection and any data transfer between the CREST Certification Network and the Internet will be by means of a USB flash drive supplied by the Invigilator. Any attempt to connect the candidate's test platform to the Internet via any means will be considered a breach of the CREST Examination rules and will result in an instant fail decision. Any attempt to retain data relating to the CREST Examinations, either locally or by remote upload, will be considered a breach of the CREST Certification Examination rules and will result in an instant fail decision. No refund of fees will be considered in these situations.

It is the candidates' responsibility to ensure their test laptop is fully prepared prior to attending the exam and it is their responsibility to bring all necessary tools, software, applications and relevant updates with them.

Note particularly that external media players are not permitted in the Certification examination, unless candidates are prepared to have these wiped (as with any other media used during the examination). If you'd like to listen to music, put it on your hard drive.

2.2.5 Infrastructure Assessment Details

The practical examination for the infrastructure assessment contains sample equipment that would typically be found in a real-world test of a medium to large size organisation. Candidates will be expected to demonstrate their capabilities in and competency at:

- Assessing network devices, such as switches and routers;
- Assessing hosts running Windows operating systems;
- Assessing hosts running Unix (both commercial and open source) operating systems;
- Assessing Windows desktop lockdowns.
- Assessing common installed application services

Knowledge gained will need to be used in an intelligent manner to demonstrate a good understanding of the technologies in use and their implications as well as simply being able to run tools and scripts.

Network mapping and network device assessment stage

The areas of the Technical Syllabus that are covered in the network mapping and network device assessment stage are as follows:

Syllabus area	Syllabus area description
A5	Record keeping, interim reporting & final results
B1	IP protocols
B2	Network architectures
B3	Network routing
B4	Network mapping & target identification
B5	Interpreting tool output
B6	Filtering avoidance techniques
C2	Domain name server (DNS)
D1	Management protocols
D2	Network traffic analysis
D3	Networking protocols

For further information, consult the Technical Syllabus.

Unix stage

The areas of the Technical Syllabus that are covered in the Unix stage are as follows:

Syllabus area	Syllabus area description
A5	Record keeping, interim reporting & final results
B5	Interpreting tool output
B8	OS fingerprinting
B9	Application fingerprinting and evaluating unknown services
B13	File system permissions
B14	Audit techniques
F1	User enumeration
F2	Unix vulnerabilities
F3	FTP
F4	Sendmail / SMTP
F5	Network File System (NFS)
F6	R* services
F7	X11
F8	RPC services
F9	SSH
G2	Web servers and their flaws
G4	Web protocols

For further information, consult the Technical Syllabus.

Windows stage

The areas of the Technical Syllabus that are covered in the Windows stage are as follows:

Syllabus area	Syllabus area description
A5	Record keeping, interim reporting & final results
B5	Interpreting tool output
B8	OS fingerprinting
E1	Domain reconnaissance
E2	User enumeration
E3	Active Directory
E4	Windows passwords
E5	Windows vulnerabilities
E8	Exchange
E9	Common Windows applications
G2	Web servers and their flaws
G4	Web protocols
J1	Microsoft SQL Server

For further information, consult the Technical Syllabus.

Windows desktop lockdown stage

The areas of the Technical Syllabus that are covered in the Windows desktop lockdown stage are as follows:

Syllabus area	Syllabus area description
A5	Record keeping, interim reporting & final results
B13	File system permissions
B14	Audit techniques
E5	Windows vulnerabilities
E7	Desktop lockdown

For further information, consult the Technical Syllabus.

2.2.6 Web Application Assessment Details

The application assessment consists of a number of applications; candidates will be presented with multiple small applications selected from a larger pool at random, each being designed to test specific vulnerability type knowledge.

The applications are based on common internet and web application technologies hosted on a mixture of both Windows and Unix platforms. No specific server technology is included or excluded.

The applications have been designed to provide the candidate with a series of generic vulnerabilities to find, assess and exploit.

Candidates will be expected to demonstrate knowledge of the following types of application vulnerability:

Syllabus area	Syllabus area description
A5	Record keeping, interim reporting & final results
C3	Customer web site analysis
E4	Windows passwords
E5	Windows vulnerabilities
G2	Web servers and their flaws
G4	Web Protocols
G7	Web Application Servers
G8	Web APIs
G9	Web Sub-Components
H3	Information gathering from web mark-up
H4	Authentication Mechanisms
H5	Authorisation Mechanisms
H6	Input Validation
H9	Use of Cross Site Scripting Attacks
I1	Web site structure discovery
I2	Cross-site scripting attacks
I3	SQL injection
I4	Session ID attacks
I5	Fuzzing
I6	Parameter manipulation
I7	Data confidentiality & integrity
I8	Directory traversal
I9	File uploads
I10	Code injection
I11	CRLF attacks
I12	Application logic flaws
J1	Microsoft SQL server

Syllabus area	Syllabus area description
J3	Web / App / Database connectivity

Candidates will be expected to exploit these issues as directed by their candidate worksheet, providing the results onto the supplied media for later review by the Invigilator.

2.3 Invigilation

A CREST assessor will be present throughout the day as Invigilator. The Invigilator is not there to assess candidates' capabilities: all assessment is via the objective written and practical components. However, the Invigilator will be able to answer any procedural questions that candidates may have, and assist in troubleshooting the exam systems.

3 Marking Scheme / Pass Mark

The marking scheme is given in the table below:

Component	Number of questions	Total Marks
Written Component Note: Taken in PearsonVue centre	150 Multiple Choice Questions (1 mark each)	150
Practical Component	**Application:** A number of mini applications – each with a set of questions. 1 Scenario Question **Infrastructure:** Sub sections of the key infrastructure elements. 1 Scenario Question	250
Total		**400**

Successful candidates must score two-thirds of the available marks in each component. That is:

- at least **100 marks** from the **written component** (possible total: 150marks), and
- at least **167 marks** from the **practical component** (possible total: 250 marks).

This represents an overall pass mark of approximately 67%, but note **that candidates must score the minimum number of marks in each section: candidates who score very well in one component but not the other will not pass.**

Unsuccessful candidates will be told their final scores in the written and practical components, along with feedback as to the general areas in which they fell short.

4 Examination Logistics & Timing

4.1 Location & Timing

Specific logistical information relating to the practical examination centres in each Region can be found on the Examination Preparation page of your chosen examination location.

Please note that the written section is performed at a PeasonVue centre and the practical completed at the CREST assessment centre.

Before the Examination starts

Before the examination starts, Candidates will:

- Need to show **suitable office ID** (eg military ID, driver's license or passport)
- Have their **NDAs** collected. This is to help us maintain the confidentiality of the examination.
- Have their **Codes of Conduct** collected.

Candidates should have read and signed both of these documents in advance.

4.2 Communication of Results

All written and practical component examination scripts will be marked independently by CREST Invigilators: this will be completed within fifteen working days of the examination and where possible by the end of the week in which the candidate sits the examination. Results will be communicated by email PDF letter to the candidate to the specified email address at booking and also a hard copy will be sent via the post.

4.3 Testing Platform

As noted in sections 1.2 and 2.2.4, CREST takes the confidentiality of the content of its examinations seriously: candidates are reminded that any attempt to retain data relating to the CREST Examinations either locally or by remote upload will be considered a breach of the CREST Examination rules and will result in an instant fail decision.

In order to help CREST maintain this confidentiality, we do not permit candidates to remove hard disks and writeable media that have been connected to the CREST Certification Network unless they have been securely wiped: we have the facility to do this.

Consequently, CREST requires all candidates to be able (and equipped) to remove their internal hard disk at the end of the exam so that it can be retained by CREST for erasure. It is the candidate's responsibility to remove any disk IDE / SATA passwords prior to handing the disk over for erasure – if this is not done then the drive will remain locked and cannot be accessed and thus cannot be returned. There is no requirement to remove software encryption (eg Bit locker etc) from the disks as this will simply be overwritten.

If the disk is not a standard SATA or USB connection then the candidate is required to provide a suitable adaptor plate or cable to allow the disk to be wiped.

It should be noted that CREST are **UNABLE** to accept responsibility for candidate laptops and only the bare drive will be retained. It is the candidate's responsibility to ensure they are competent to remove the disk.

Candidates will bring their own testing platform (e.g. laptop with appropriate software toolkit) to the CREST offices. It must have an RJ45 Ethernet connection capable of running at least 100Mbps, configured to obtain an IP address via DHCP. Additionally, it must be capable of reading from and writing to a USB key formatted with a FAT file system.

The operating systems and tools used must be capable of conducting an infrastructure or web application test: candidates may use any software tools they deem appropriate, but are responsible for ensuring that any tools used are appropriately licensed and function correctly.

It is important to note that candidates **must surrender their hard disk and any other writeable media for wiping at the end of the assessment process**. Hard disks, once wiped, will be returned to the candidates: we envisage that this will be within approximately two weeks of completion of the certification examination providing no disk access or other technical issues arise.

5 Example questions (written component)

5.1 Multiple choice

An example multiple choice question is given below, along with the answer.

5.1.1 Question

Which of the following is NOT a valid DNS record type?

A. *SOA – Start of Authority*
B. *NWS – News Server*
C. *CNAME – Canonical Name*
D. *MX – Mail eXchange*
E. *PTR - Domain Name Pointer*

Candidates should clearly indicate their answer by circling the appropriate letter in their test script.

5.1.2 Answer

The correct answer is (B).

5.1.3 Marking scheme

Each multiple-choice answer is worth one (1) mark. No points are deducted for incorrect answers.
